## EDUCATION

**Regis University**                                                                    **Expected Graduation 2027**
Grade Point Average – 4.0
Master of Science
Software Engineering

**University of Washington, Bothell**                                      **Graduated August 2022**
Grade Point Average - 3.73
Bachelor of Science
Computer Science and Software Engineering

## SKILLS

**Languages**                          **Technologies**                          **Cloud Services**

- Javascript  • Java        • PHP          • React      • Node.js                • AWS
- HTML           • MySQL       • CSS          • Jest        • Jira

## EXTRACURRICULAR/PROJECTS

- EYE Research Group                                                    **June 2022 to August 2023**
  - Designed and implemented webpages with practical application for obtaining consent forms used in eye therapy management by Near Vision Institute. This tool streamlined the consent form process with improved data processing. In conjunction, I designed and executed a web-based patient intake form completed by patients prior to initial visits with the provider. Made with **PHP**, **HTML**, **Bootstrap**, **MySQL**, **AWS EC2**, **AWS RDS**.
- Messenger App
  - Developed a chat application enabling users to create accounts, add friends, and engage in personal or group conversations. The app also allows profile customization and chat theme personalization. Made with **React**, **Tailwind**, **JavaScript**, **Node.JS**, **Express**, **Railway**, **Render**, **Jira.** https://messenger-6gej.onrender.com/
- Family Handyman & Home Repair Services
  - Collaborated with YL Drip to design a website showcasing their apparel services. The site features an integrated email service, allowing users to send pictures, contact the company, and request project quotes. Utilized **React**, **Tailwind**, **JavaScript, Node.js**, **Express**, **Railway**, **Render Cloudinary**, **Jira.** https://www.yldrip.com/
- Family Handyman & Home Repair Services
  - Consulted, designed, and developed a website for the Family Handyman & Home Repair Services business, enabling customers to view previous projects and testimonials, as well as contact the business. Made with **React**, **Tailwind**, **Jira**, and **Figma**. www.thefamilyhandymanservices.com
- Crypto Tracker
  - Developed a web app in collaboration with a team of UW students that allows user to track cryptocurrencies, receive email updates on top cryptos, and save cryptos that they want to monitor to an account that they created. Created the API and email subscription features. Made with **Python**, **Flask**, **AWS Elastic Beanstalk**, **AWS S3**, **AWS DynamoDB**, **AWS Code Pipeline**, **AWS SNS**, **AWS Lambda**.
- Staff Directory
  - Coded a website that allows users to load data, clear data, or query staff information using first name and/or last name. The website loads and parses information from a text file in an AWS S3 bucket then saves it in a AWS DynamoDB database. Created with **python**, **HTML**, **flask**, **AWS S3**, **AWS DynamoDB**, **AWS Elastic Beanstalk**.

## WORK EXPERIENCE

- Target                                                                                          2019 to Present
  - Delivers quality customer service through excellent customer relations, attention to detail, efficient completion of assigned tasks
  - Dependable team player and trusted trainer to incoming staff
